

Dear Atlantbh,

I am Lejla Hadžović and I'm 21 years old. At the moment, I am a third-year student at Faculty of Information Technologies of University "Džemal Bijedić" in Mostar, I am studying Software Engineering. Throughout my education I earned theoretical knowledge and I have had a chance to earn experience working with programming languages such as C#, C++ and I earned some beginner knowledge working with Angular framework, what I assume is important for position "Software Development" that I applied for also I have ability to successfully analyze and solve problems, strong willingness to learn, ability to work in a team and also have knowledge in the field of Object Oriented Programming.

I was always interested in what is this company offering because you are one of the most successful in our region and I heard a lot of positive comments about your internships. Being a third-year student I am also required to have 30 days of practical work for one of my subjects, but that is not the only reason I am applying for this internship. I am very excited to earn some more practical knowledge about software development and begin working on a real project to show what are my capabilities and to firstly prove myself that I am ready to start working on real projects then of course to prove you if you give me the opportunity to do that, which I would be very grateful for and I would try my best, learn and also work as much as I possibly can even though I don't have much experience and projects behind me.

In hopes that you will answer positively to my application I am looking forward to hear from you soon.

With best regards,

Lejla.
